Teens Teaching Tech

[Submit Here](#)

Due Friday, December 3, 2021

Teens Teaching Tech is a Pathways-wide video contest where students who understand a topic in technology can present a short video lesson. This is a great way to deepen students' understanding of a topic by allowing them to explain something they find interesting in a creative way and receive constructive feedback regarding their presentations. This is a great way to build community in your classroom by having students teach each other topics in a relatable way. Please have your students enter their videos by **December 3, 2021** to the Google link above. We can't wait to see what they come up with!

We will use the following criteria to give feedback:

1. Succinct – Brief outline of the topic, to the point
2. Time Limit – 3-6 minutes is ideal, certain topics may need up to 10 minutes
3. Effectiveness – Is it easy to comprehend?
4. Creativity – is it fun to watch? Are there interesting examples? Is the solution helpful?

Videos should follow the basic structure below:

1. Statement of the topic or lesson
2. Brief overview of the problem
3. Walk through or present the solution
4. Summarize what we learned

Some optional but encouraged additions:

1. Show an example— either real life examples or simplified for understanding

2. Share some resources for further research— a website, readings, a related video

Some Examples:

1. Physics Girl: https://www.youtube.com/watch?v=HrduBZ319Xl

2. Coding Train: https://www.youtube.com/watch?v=c3TeLi6Ns1E

3. Great Big Story: https://www.youtube.com/watch?v=1Wi2A8la3VQ

4. ColorCode: https://www.youtube.com/watch?v=N39fYbI6x84
